My research advances automated software engineering and security, with an emphasis on program analysis, synthesis, and formally verified LLM-based methods. Drawing on extensive industry experience, I address practical challenges in software engineering. My Ph.D. work received a first-place award at ASE'21 for an innovative inter-procedural program synthesis approach, and my papers have been accepted at top venues, including ICSE, OOPSLA, ASE, ICSE, and ICPC. Currently, my postdoctoral research focuses on the combination of formal verification and LLMs with applications in software productivity and quality. My goals include ML-supported program synthesis, large-scale code repair, and self-reconfigurable software. Alongside academic contributions, I have submitted grant proposals as PI and co-PI, reflecting my commitment to impactful research.
